Achievements/Tasks

- Development of a comprehensive online academy platform catering to educational needs includes courses, exams ,forums and parent dashboard to track his children.
- Integrated real-time notifications and alerts to enhance communication between teachers, students, and parents using firebase.
- Improved academy functionalities , such as search for teachers by name or teachers closest to the geographical location
- Developing a chat site integrating it with Jitsi to enable smooth audio and video calls within the platform. This allowed users to connect with each other seamlessly and have virtual face-to-face conversations.
- Developing an online store that makes shopping easy and enjoyable. Creating a simple cart for adding items, a way to save favorites, and a system to track past purchases. Ensuring safe online payments. Adding a strong search tool for finding things quickly.

PERSINAL PROJECTS

Blogs (05/2023 - 06/2023)

- *Effortless Blog Creation and Categorization:* I've played a pivotal role in designing and implementing an intuitive Admin Dashboard that empowers administrators to seamlessly create and categorize new blog posts. This feature streamlines content input and organization.
- *Enhanced Blog Display and User Interface:* I've actively participated in designing and developing an elegant frontend for the Client Website, ensuring a seamless and user-friendly experience for visitors.
- *Last Blogs and Efficient Search Functionality:* I've implemented features that enable users to easily access the latest blogs and perform efficient searches. This facilitates content discovery and engagement.
- *Most Viewed Blogs Integration:* A standout feature is the integration of a "Most Viewed Blogs" section.

Vella (12/2022 - 02/2023)

- I'm creating features that allow users to have conversations with others either one-on-one or in groups. I'm using Socket.IO to make sure messages are sent and received instantly.
- I'm adding different ways to handle messages in the project. People can delete messages for more privacy, easily share messages with others, and respond to messages to keep conversations organized and clear.

Real estate (06/2023 - 08/2023)

- This project was developed to facilitate the process of displaying real estate available for sale or rent, and to facilitate the process of searching for real estate close to the geographical location of a user
